December, 1985

INTRODUCTION

This report is a statistical summary of vital events in New Hampshire for the calendar year of 1984. Data concerning births, deaths, marriages and divorces are presented. Interpretations of these data should take the following information into account.

Under-Registration of Events: While under-registration can occur, it can be considered a minimal problem in New Hampshire. The number of reports of events received too late for inclusion in annual summary statistics is not statistically significant when state-wide patterns are examined.

Geographic Allocation of Events: Geographic allocation is based on the reported residence or on the reported place of occurrence of an event. Every effort is made to be as accurate and as complete as possible in allocating an event. For births, infant deaths and fetal deaths, residence denotes the mother's usual residence. For deaths, the decedent's usual residence is used. For marriage and divorce, the data refer to New Hampshire occurrences only since there is no exchange of information for these events among states.

Comparability in Cause-of-Death Statistics: Two major factors affect the interpretation and comparability of cause-of-death statistics over time. They are changes in the scheme for classifying the causes and changes in diagnostic practices.

The classification scheme, the International Classification of Diseases (ICD), is modified approximately once every ten years to reflect changes in medical opinion and practices. The most recent revision, the ninth, was issued in 1978. Cause of death statistics in this 1984 report reflect the use of this ninth revision of the ICD.

To compare mortality statistics from one revision of the ICD to the next it is necessary to use "comparability ratios". Comparability ratios provide a measure of how much discontinuity exists in the mortality data resulting from the introduction of a new revision for the ICD. Such ratios are developed by comparing the number of deaths assigned to a cause, or group of causes in the previous revision to the number assigned in the next revision.

Underlying Cause of Death Data: Cause of death data have been classified using the automated system known as ACME (Automated Classification of Medical Entities). The system provides for computer assignment of the underlying cause of death in accordance with decision rules specified in a computer program. The rules are the same as those applied by nosologists in assigning underlying causes of death.

Nosologist application of the rules may sometimes contain error. ACME is said to eliminate this avenue of error since the exact same criteria are applied in every case in the machine process.

Interpreting Rates: A number of points should be kept in mind when examining rates.

Rates based on small numbers of events usually exhibit considerable variation. Such variation substantially limits the usefulness of rates as estimators of the probability of the occurrence of an event and their utility in making comparisons.

Unadjusted rates are not reliable for drawing definitive conclusions when comparing different areas since they do not take into account various factors which may influence the rate such as age, sex and occupation. For example, one should not assume that a rate difference between two areas for cardiovascular disease is significant where no adjustment for the age distributions in these areas has been made, since cardiovascular mortality rises with advancing age.

Where a rate difference appears to be significant, extreme care should be exercised in attributing the difference to any particular factor or set of factors. There are many variables which can influence rates and establishing a valid interpretation of the reason(s) for a rate difference requires substantial data and exacting analysis.

NOTE: All 1984 U.S. rates appearing in this report are provisional.

Vital Events Summary 1984

TABLE 1. SUMMARY VITAL STATISTICS, NEW HAMPSHIRE, 1984

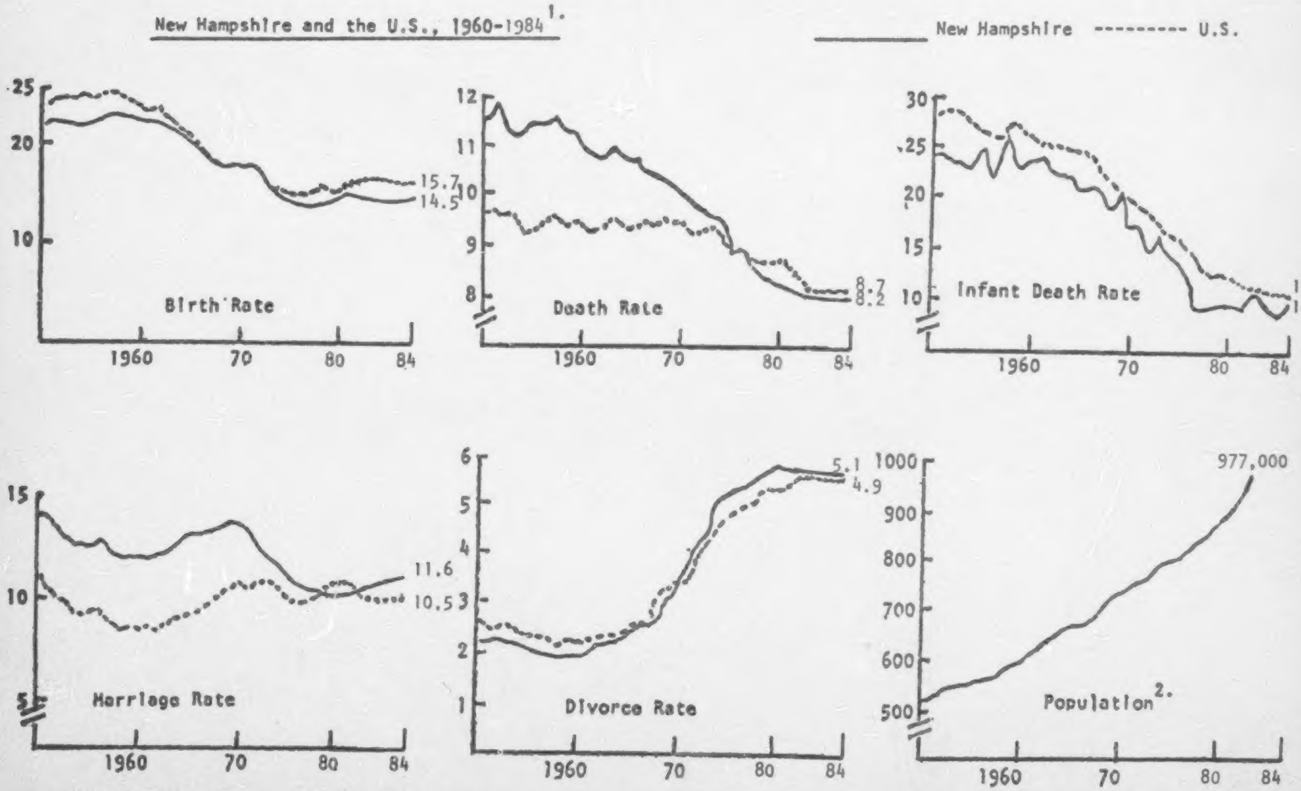
EVENT	RESIDENT NUMBER[1]	RESIDENT RATE[2]	OCCURRENCE NUMBER	OCCURRENCE RATE[2]
Births	14,211	14.5 per 1000 pop.	14,060	14.4 per 1000 pop.
Deaths	8,005	8.2 per 1000 pop.	7,778	8.0 per 1000 pop.
Infant Deaths	145	10.2 per 1000 live births	113	7.9 per 1000 live births
Fetal Deaths	80	5.6 per 1000 live births & fetal Dths.	90	6.3 per 1000 live bths. & fetal dths.
Marriages[3]	--	--	11,325	11.6 per 1000 pop.
Divorces [3,4]	--	--	4,942	5.1 per 1000 pop.

Resident Natural Increase: 6,206
Resident Rate of Natural Increase: 6.4 per 1,000 population
1984 Estimate of State Population: 977,000 on July 1, 1984.

1. Residence for births, infant deaths and fetal deaths is usual residence of mother.
2. Rates calculated using Federal-State Cooperative population estimate of 977,000 for 1984.
3. Marriage and divorce information is for occurrences within New Hampshire only.
4. Divorces include legal separations and annulments.

TRENDS

New Hampshire and the U.S., 1960-1984[1.]



1. Birth, Death, Divorce, Marriage Rates: per 1,000 population. Infant Death Rate: per 1,000 live births.

2. Population in thousands

FIFTEEN YEAR SUMMARY, 1970-1984

RESIDENT BIRTHS
During the first half of the seventies, the birth rate declined from 18.3 births per 1,000 population in 1970 to 13.6 in 1976. The rate was in an upward trend in the latter seventies and reached 14.9 in 1980. Since then the rate has generally decreased and was 14.5 in 1984.

RESIDENT DEATHS
The number of deaths for every 1,000 persons decreased through the seventies, dropping from 10.2 in 1970 to 8.4 in 1978 and 1979. After further decline to 8.2 in 1980, the rate has remained unchanged with an exception in 1982 when the lowest state death rate of record was observed, 8.0.

MARRIAGES
The marriage rate declined from 13.6 per 1,000 population in 1970 to 10.0 in 1980. The rate has been increasing since then and was 11.6 in 1984.

DIVORCES
Throughout the seventies, the divorce rate maintained an upward trend after reaching a record high of 5.9 per 1,000 population. In 1979, the rate began to decrease and was 5.1 in 1984.

1. Live Births, Deaths, Infant Deaths, Neonatal Deaths, Fetal Deaths and Maternal Deaths are by residence. Marriages and divorces are by occurrence.
2. Birth, Death, Marriage and Divorce rates: per 1,000 population. Infant death, Neonatal death and Out-of-Wedlock birth rates: per 1,000 live births.
   Maternal death rate: per 10,000 live births. Fetal death rate: per 1,000 live births plus fetal deaths.
3. Estimated for 1970-1979. U.S. Census final state population for 1980. 1981: Provisional Estimates from the U.S. Bureau of the Census. 1984 estimate based on federal-state cooperative estimate as of July 1, 1984.

POPULATION

POPULATION

The 1984 state population was estimated to be 977,000 as of July 1, 1984.* This estimate reflects additional population of 18,000 and represents an increase of 1.9 percent from the previous year.

The amount of natural increase for 1984 (the excess of births over deaths) was 6,206 and the rate of natural increase was 6.4 per 1,000 population.

Of the additional population of 18,000, 34.5 percent is attributed to natural increase while 65.5 percent is assigned to in-migration.

As Table 3 below shows, a lower percentage of population growth in the eighties thus far (57.0 percent) is assignable to in-migration compared to the seventies (67.9 percent).

U.S.Census Bureau Provisional Estimates of the 1983 State Population by Age

Table 5 provides provisional estimates of the New Hampshire 1984 population by age and of the amount of population change by age-group since 1980. The most rapid growth occurred in the 35 to 44 year age group, 28.0 percent, while the 5 to 14 year group reflected the highest level of decline, down by 5.4 percent. The state's elderly (65 and over) increased from 102,967 in 1980 to 114,000 in 1984, a change of 10.7 percent.

TABLE 5 **NUMBER AND PERCENT DISTRIBUTION OF THE POPULATION BY AGE NEW HAMPSHIRE, 1980 and 1984[1]**

* 1984 state and county population estimates furnished by the N.H.Office of State Planning.
1984 town populations are mathematical estimates prepared by BVRHS.

NATALITY

- NATALITY -

Resident live births totaled to 14,211 in 1984 and the state birth rate was 14.5 per 1,000 persons, reflecting a slight increase from 1983's rate of 14.3. The New Hampshire birth rate was lower than the 1984 national rate of 15.7 per 1,000 population.

Resident births which took place out-of-state accounted for 12.1 percent (1,721) of total resident births. The majority of these out-of-state births, 84.8 percent (1,459) occurred in the state of Massachusetts while 12.1 percent (209) took place in Vermont and 1.2 percent (21), in Maine.

The number of births to mothers 19 years of age and younger for every 1,000 births, decreased again, from 89.8 in 1983 to 86.1 in 1984. Comparable birth numbers for the 20-24 mother age group also declined. For mothers at ages 30-34 and 35 and above, births per 1,000 births increased. For instance, at the 30-34 year age level there were 204.2 births for every 1,000 live births in 1984 compared to 200.9 in 1983. See Table 7 below.

The percentage of resident live births reflecting either no prenatal care or prenatal care which commenced in the third trimester, was 2.3 percent in 1984 compared to 2.1 in 1983. On the average, there have been 312 births annually with either no or third trimester prenatal care, for the five year period of 1980 to 1984. See Table 8 below.

1. Late prenatal care: care commenced in third trimester.
2. Percent in specified county. (Excludes unknowns).

The number of births that were low birth-weight (which placed the infant at relatively high risk for physical disorders and for mortality) increased from 687 in 1983 to 707 in 1984, but the corresponding percentage remained the same, 5.0 See Table 9 .

1. Low birth-weight: Less than 2500 grams.
2. Percent in the specified county.

Out-of-wedlock births (at higher than average risk of low-birth-weight newborns) increased in both number and percentage since 1983. As Table 10 indicates, these births totaled to 1,792 in 1984 compared to 1,647 in 1983, while the corresponding percentage increased from 12.0 to 12.6 percent.

* Percent in specified county.

Among all out-of-wedlock births, the age of the mother was 19 years or less in 36.2 percent of the births while the proportion of births with mothers at ages 20 to 24 years was 39.4 percent. For the remainder of births, 24.4 percent, the mother's age was 25 or more years.

Among "teen-mother" births only, 53.0 percent (648) were out-of-wedlock in 1984 compared to 48.6 percent (597) in 1983. See Table 11.

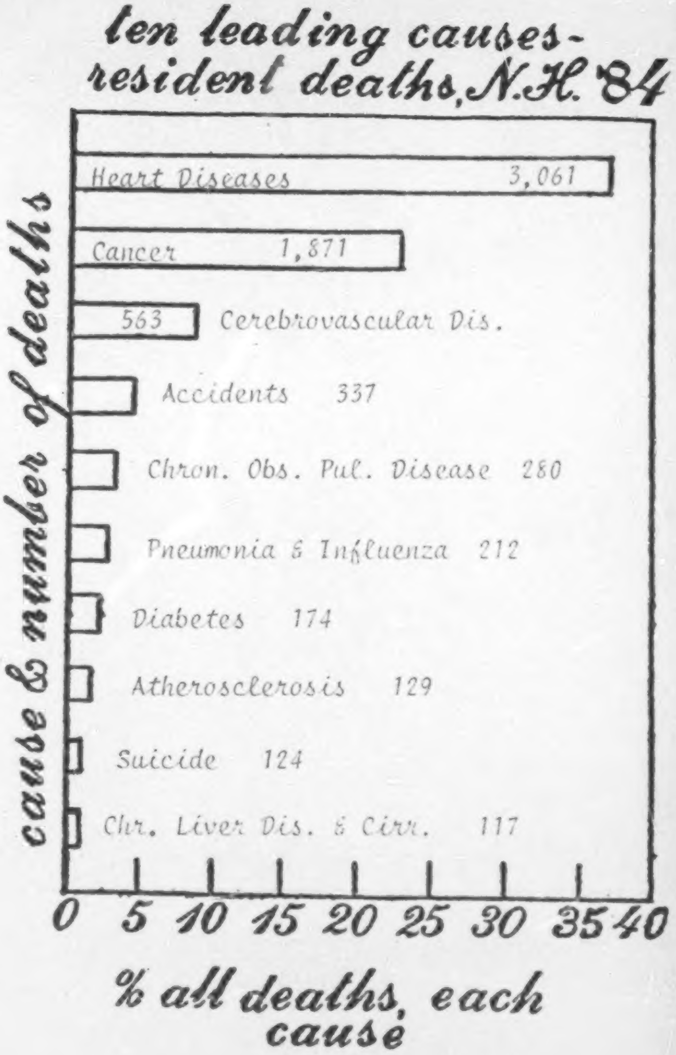
MORTALITY

- MORTALITY -

Resident deaths numbered 8,005 in 1984, 103 more than in 1983 but the death rate remained the same at 8.2 per 1,000 population. In comparison with the U.S. the 1984 state rate is 5.7 percent lower than the 1984 national death rate of 8.7.

Most resident deaths, 7,076, occurred within the state while 929 took place out-of-state. The majority of out-of-state deaths, 567, were in Massachusetts.

Male deaths totaled to 4,133 and outnumbered female deaths, 3,872. The 1983 median age at death for all persons was 75.0 years, slightly higher than the 1983 median, 74.2 years.



Ten Leading Causes of Death*

Diseases of the heart, cancer and cerebrovascular diseases again ranked as the three most frequent causes of mortality and were responsible for 68.6 percent of total deaths. All accidents was the fourth leading cause while chronic obstructive pulmonary disease was fifth and pneumonia/influenza ranked sixth. Diabetes mellitus, atherosclerosis, suicide and chronic liver disease-cirrhosis, in that order, were leading causes six through ten. All ten leading causes combined accounted for 85.8 percent of total resident mortality.

1984 New Hampshire death rates for the leading causes are presented in Table 16.

---

* *Causes of death have been classified using ACME, an Automated system. See introduction.*

Leading Causes of Death in Age Groups

Among state residents ages one to 34 years, the most frequent cause of death remained unchanged from 1983 and was "all accidents" again in 1984.

Among those 35 to 64 years, malignant neoplasms was the leading cause while Diseases of the Heart was the most frequent cause for those age 65 and over.

TABLE 17 LEADING CAUSE OF RESIDENT DEATH IN AGE GROUP BY SEX, NEW HAMPSHIRE, 1984

AGE GROUP	Leading Cause of Death With ICD-9 Code No.	% of All Deaths in Age Group	- S E X - Male No.	Fem No.	M & F No.	No. Deaths All Causes M & F

All Ages	Dis. of the Heart	38.2	1,582	1,479	3,061	8,005

Cardiovascular Disease Mortality

Diseases of the heart, the 1984 leading cause of resident mortality accounted for 38.2 percent (3,061) of total deaths. The corresponding rate was 313.3 deaths per 100,000 population, 1.7 percent above the 1983 rate of 308.1. The New Hampshire 1984 rate is 3.4 percent lower than the 1984 U.S. heart disease rate of 324.4.

More males (1,582) than females (1,479) died from heart disorders.

The major component of heart disease mortality, ischemic heart disorders, accounted for 73.1 percent (2,238) of all deaths from heart disease. Among ischemic heart disorders, acute myocardial infarction (AMI) predominated: 54.8 percent (1,227 of 2,238) of mortality was attributed to this cause.

1. Per 100,000 population in the specified county.
2. ICD 9th Rev. Codes: 390-398, 402, 404-429.

Cerebrovascular diseases, another category of major cardiovascular disorders and the third leading cause of resident death in 1984, claimed 563 lives, 46 fewer than in 1983 and the corresponding rate was 57.7 deaths per 100,000 persons, 9.1 percent lower than the 1983 rate of 63.5. The 1984 New Hampshire rate is 12.0 percent lower than the 1984 U.S. rate of 65.6.

2. ICD 9th Rev. Codes: 430-439.

Cancer Mortality

In 1984, 1871 deaths were attributed to malignant neoplasms, 36 more than in 1983 but the cancer death rate was virtually unchanged, 191.5 for 1984 compared to the previous year's 191.4 per 100,000 population. The 1984 state rate also differed only very slightly from the 1984 national cancer death rate of 191.6.

1. Per 100,000 population in the specified county.
2. ICD 9th Revision codes: 140-208.

Male deaths from cancer numbered 957 while female deaths totaled to 914. Table 21 below presents the number and percent of cancer deaths by sex according to the site of malignancy. Among males, cancer of the trachea, bronchus and lung accounted for the leading percentage of deaths, 35.9 percent. Among females, breast cancer accounted for the highest percentage of cancer mortality, 19.4 percent. Over-all, cancer of the trachea, bronchus and lung was the most frequent type of cancer mortality in 1984 as in previous years, accounting for 504 deaths, 26.9 percent of the total.

Accident Mortality

Accidents, 1984's fourth leading cause of resident mortality was responsible for 337 deaths. The accident death rate was 34.5 per 100,000 population, slightly below the 1983 rate of 34.7 and 14.0 percent below the national 1984 rate of 40.1.

Motor-vehicle accident (MVA) deaths were responsible for more than half, 55.5 percent (187 of 337) of all accident mortality and substantially more males (126) than females (61) died as a result of such accidents.

Non-MVA deaths numbered 150 and of these, the majority were male, 94 compared to 56 female. The dominant source of non-MVA mortality was "falls" which accounted for 49 deaths.

TABLE 22 TYPE OF RESIDENT ACCIDENTAL DEATHS BY SEX, NEW HAMPSHIRE, 1984

---

1. *The numbers of deaths by cause for individual towns of populations below 1,000 are not shown but are aggregated in "remainder of county" in accordance with confidentiality policy.*

-INFANT, NEONATAL AND FETAL MORTALITY -

Infant Deaths

1984 resident infant deaths numbered 145, 30 more than in 1983 and the infant mortality rate increased from 8.4 deaths per 1,000 live births, to 10.2. The 1984 New Hampshire rate is lower than the 1984 U.S. rate of 10.6.

A majority of infant deaths took place at under seven days of age, 58.6 percent (85 of 145) while 44.1 percent (64) occurred under one day of life. Among selected causes of death (see Table 27) "other conditions originating in the perinatal period" was the leading cause of mortality, accounting for 49 of all infant deaths.

Neonatal Deaths

Resident neonatal deaths totaled to 102 compared to 78 for the previous year. The death rate was 7.2 for every 1,000 live births in contrast to the 1983 rate of 5.7.

Perinatal and Fetal Deaths

In 1984, the perinatal death rate was 11.5 per 1,000 live births plus fetal deaths in comparison with the 1983 rate of 10.1.

Reports of 1984 fetal deaths amounted to 80, 8 more than the 1983 total of 72. The corresponding death rate was 5.6 per 1,000 live births plus fetal deaths.

Fetal mortality was highest among mothers of 35 years and over at a rate of 7.9 deaths per 1,000 deliveries. It was lowest for mothers of 25 to 29 years, 4.3 per 1,000 deliveries.

MARRIAGE and DIVORCE

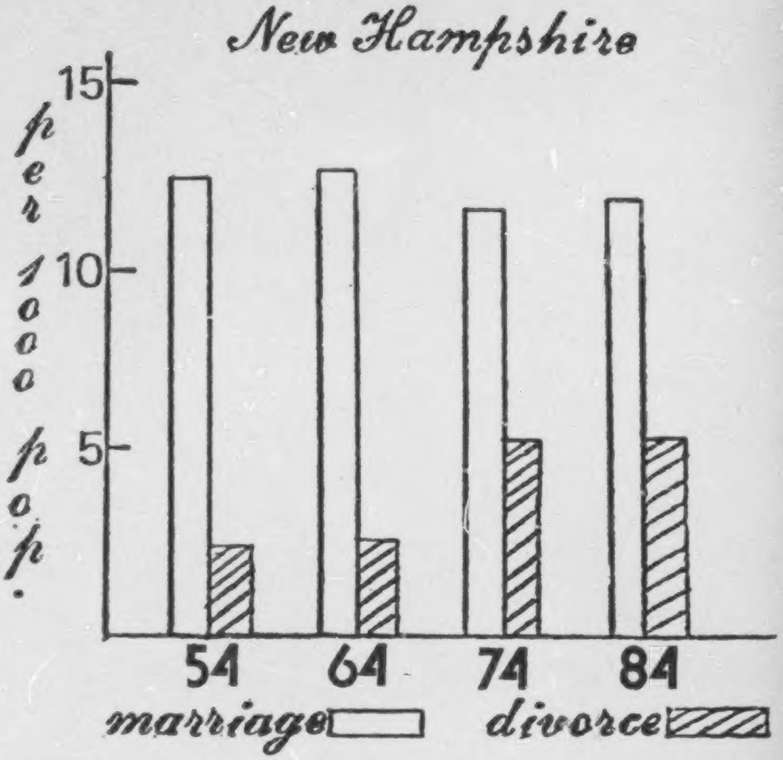
Marriage

In 1984, 11,325 marriages were performed in New Hampshire, 354 more than in 1983 and the marriage rate reached 11.6 per 1,000 population, slightly above the 1983 rate of 11.4. The 1984 state rate of 11.6 is higher than the 1984 national rate of 10.5.

The 1984 median ages of both brides and grooms increased compared to last year. The median age of brides was 26.0 years as against 25.5 years in 1983 while grooms had a median age of 28.0 years in comparison with 27.8 for 1983.

The educational attainment of persons marrying in 1984 was slightly higher than in 1983. Grooms with one or more years of college accounted for 43.8 percent of the total in 1984. This percentage was 42.8 in 1983. The percentage of brides with one or more years of college rose from 41.9 percent in 1983 to 42.3 in 1984.

First marriages for both bride and groom as a percentage of all marriages increased slightly from 51.3 percent in 1983 to 51.7 percent in 1984.



Divorce

The divorce rate was 5.1 per 1,000 population, slightly above the 1983 rate of 5.0. The 1984 state rate is just above the 1984 U.S. rate of 4.9.

Half of all 1984 divorces took place before 7.0 median years of marriage, reflecting a drop in the duration of marriages ending in divorce since 1983 when the median was 7.6 years.

The number of divorces involving minor children was 2,908, 58.8 percent of all dissolutions and the number of minors totaled to 5,016. Of divorces involving minors, 96.4 percent (2,806) were open to contests over the award of physical custody of the minor children. In most of these cases (2,534 or 90.3 percent) the court's award of physical custody was not contested while the award was disputed in 272 (9.6 percent) instances.

In cases where the court's physical custody award had not been contested, the mother of the minor childen was the recipient of custody most frequently, 82.3 percent of the time while the father received custody 9.8 percent of the time. On 156 occasions (6.2 percent) "split" physical custody was the outcome, with each parent given custody of at least one child.

Where the award of physical custody was in contention (272 divorces) mothers acquired custody in 83.4 percent of these cases while fathers received 8.5 percent of the custody awards. Split custody was the result in 5.9 percent of contested cases. See Table 32.

1. Includes defaulted cases.
2. Custody of each child awarded on separate basis, with custody of one child or more given to mother and custody of one child or more, to father.
3. Total divorces with minors that were open to custody awards: 1982 - 2,938; 1983 - 2,778; 1984-2,806.

APPENDIX

- APPENDIX -

DEFINITIONS

Birth Weight	Weight of fetus or infant at time of delivery (normally recorded in pounds and ounces).
Deliveries	Live births and fetal deaths.
Early Neonatal Death (or Hebdomadal Death)	Death occurring to an individual less than seven days of age.
Fetal Death (reportable)	Death prior to the complete expulsion or extraction from the mother of a product of conception, having passed through at least the 20th week of gestation (the weight of which is 350 grams or more); the fetus shows no signs of life such as a beating heartbeat, pulsation of the umbilical cord, or definite movement of voluntary muscles.
Gestational Period	Number of weeks elapsed between the first day of the last menstrual period and date of delivery.
Out-of-Wedlock Birth	Birth record states mother "not married" on date of child's birth.
Infant Death	Death occurring to an individual less than 1 year of age.
Late Neonatal Death	Death occurring between 7 and 28 days after birth.
Live Birth	A live birth is a complete expulsion or extraction from its mother a product of conception, irrespective of the duration of pregnancy which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or a definite movement of voluntary muscles.
Live-Birth Order	Order number is equal to number of previous live births plus current birth.
Low Birth Weight	Birth wherein the birth weight is less than 2500 grams (approximately 5 lbs. 8 oz.).
Maternal Death	Those deaths wherein the physician has designated a maternal condition as the underlying cause of death.
Neonatal Death	Death occurring to an infant less than 28 days of age.
Occurrence	Place where event actually occurred regardless of residence.
Perinatal Death	Fetal Death or a death under one week of age.
Race	Race of mother, father, or decedent is as stated on certificate.
Residence	Usual place of residence for person to whom event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.

-APPENDIX-

RATE FORMULAS

Age-Adjusted Death Rate = (Age-Specific Death Rates/X/Proportion of standard population in Specific Age Group)

Age-Specific Birth Rate = $\frac{\text{No.of Resident Live Births for a Specific Age of Mother}}{\text{Tot. Female Population of Specific Age (Mid Year)}} \text{ X } 1000$

Age-Specific Death Rate = $\frac{\text{No. of Deaths in a Specific Age Group}}{\text{Tot.Resident Population in Specific Age Group}} \text{ X } 100{,}000$

Crude Birth Rate = $\frac{\text{No. of Resident Live births}}{\text{Total Resident Population (Mid-Year)}} \text{ X } 1{,}000$

Crude Death Rate = $\frac{\text{No. of Resident Deaths}}{\text{Total Resident Population (Mid-Year)}} \text{ X } 1{,}000$

Divorce Rate = $\frac{\text{No. of Divorces, Annulments, Leg.Separations}}{\text{Tot. Resident Population (Mid Year)}} \text{ X } 1{,}000$

Early Neonatal Death (or Hebdomadal Death) Rate = $\frac{\text{No. of Early Neonatal Deaths}}{\text{Total Resident Live Births}} \text{ X } 1{,}000$

Fertility Rate = $\frac{\text{No. of Resident Live Births}}{\text{Tot.Resident Female Population (15-44)}} \text{ X } 1{,}000$

Fetal Death Rate = $\frac{\text{No. of Resident Fetal Deaths}}{\text{No.of Res.Live Births \& Res.Fetal Deaths}} \text{ X } 1{,}000$

Out-of-Wedlock Birth Rate = $\frac{\text{No. of Out-of-Wedlock Births}}{\text{Total Resident Live Births}} \text{ X } 1{,}000$

Infant Death Rate = $\frac{\text{No. of Infant Deaths}}{\text{Total Resident Live Births}} \text{ X } 1{,}000$

Low-weight Birth Rate = $\frac{\text{No. of Live Births (Less than 2500 grams)}}{\text{Total Resident Live Births}} \text{ X } 1{,}000$

Marriage Rate = $\frac{\text{No. of Marriages}}{\text{Tot.Resident Population (Mid Year)}} \text{ X } 1.000$

Maternal Death Rate = $\frac{\text{No. of Maternal Deaths}}{\text{Total Resident Live Births}} \text{ X } 10{,}000$

Neonatal Death Rate = $\frac{\text{No. of Neonatal Deaths}}{\text{Total Resident Live Births}} \text{ X } 1{,}000$

Perinatal Death Rate = $\frac{\text{No. of Perinatal Deaths}}{\text{Resident Fetal Deaths}} \text{ X } 1{,}000$

ECONOMIC CONDITIONS IN NEW HAMPSHIRE

A REPORT BY THE NEW HAMPSHIRE DEPARTMENT OF EMPLOYMENT SECURITY PREPARED IN COORDINATION WITH THE UNITED STATES BUREAU OF LABOR STATISTICS

September
Wesley S. Noyes, Jr., Editor
Supervisor, Economic Analysis and Reports
85-9

SUMMARY: Total unemployment in New Hampshire dropped by 3,500 from mid-August to mid-September. The latest total of 15,050 unemployed represents 2.8 percent of the civilian labor force of 541,630. The August rate of 3.4 percent was the nation's lowest and it is expected that September's 2.8 rate will be too. A year ago the rate was 3.3 percent. Nationally the rates were 6.9 percent in both September and August, and 7.1 percent a year ago. All labor market areas in New Hampshire experienced lower unemployment in September when compared with August. The largest unemployment decrease occurred in the Portsmouth-Dover-Rochester area with 780 fewer unemployed. The Salem area (New Hampshire's Portion of the Lawrence-Haverhill area) ranked next with 520 fewer unemployed. Unemployment rates ranged from a high of 4.4 percent in the Salem area to a low of 1.7 percent in the Concord area. Overall, the civilian labor force decreased by 8,950 workers from August as many trade and service establishments closed after the Labor Day weekend. Many of the workers affected were students who returned to school.

Nonagricultural wage and salary employment dropped by 500 workers from August as manufacturing was down 500 and nonmanufacturing was unchanged. The reopening of schools resulted in the hiring of bus drivers, teacher aides, cafeteria workers and janitors. Compared to the same period a year ago, nonagricultural wage and salary employment is up 28,950 as manufacturing decreased 5,050 while nonmanufacturing increased 34,000. The largest gain occurred in trade which is up 15,700 workers over last year. Construction has experienced a very good year and is up 9,100 workers over last September's level. The most significant drop in jobs occurred in electrical products which is down 2,900 from last year.

Manchester Economic Conditions: Total unemployment decreased by 1,140 as the rate dropped from 2.6 to 2.2 percent. The August rate of 2.6 percent was the second lowest rate recorded by the nation's 253 metropolitan areas reporting. A year ago the rate was 2.5 percent. Nonagricultural wage and salary employment decreased 100 workers from August but is up 2,200 workers from the year ago level. While manufacturing has lost 300 workers over the year, nonmanufacturing has added on 2,500. Services is up 850 and construction 700 over last year's level.

Nashua Employment Condition: Total unemployment decreased by 880 from August as the jobless count went from 3,330 to 2,850. The unemployment rate dropped from 3.5 to 3.0 percent. A year ago the rate was 2.5 percent. Nonagricultural wage and salary employment increased by 300 from August and is up 2,650 from a year ago. Over the year manufacturing has decreased by 1,100 workers while nonmanufacturing has increased by 3,750. Trade is up 1,450, services 950, and construction 600.

This data is based on the quarterly U.C. reports submitted by employers for all four quarters of 1984. There were 25,329 employers reporting in the fourth quarter 1984.

All ten counties shared in the employment gains in 1984 over 1983. Both manufacturing and nonmanufacturing divisions had employment gains in all ten counties.

The report "Employment and Wages by County" for the third and fourth quarter 1984 and year average by industry will be published in November. Copies will be available for those not already on our mailing list. Write N.H. Department of Employment Security, Economic Analysis and Reports, 32 South Main Street, Concord, N.H. 03301, if you wish to receive a copy.

ECONOMIC CONDITIONS IN NEW HAMPSHIRE

A REPORT BY THE NEW HAMPSHIRE DEPARTMENT OF EMPLOYMENT SECURITY PREPARED IN COORDINATION WITH THE UNITED STATES BUREAU OF LABOR STATISTICS

October
Wesley S. Noyes, Jr., Editor
Supervisor, Economic Analysis and Reports
85-10

SUMMARY: Total unemployment in New Hampshire decreased by 1,150 from mid-September to mid-October. The jobless count of 13,900 represents only 2.6 percent of the total civilian labor force of 540,240. The rates were 2.8 percent in September and 3.2 percent a year ago. The last time the unemployment rate was at 2.6 percent was in August 1979. Nationally the rates were 6.8 percent in October, 6.9 percent in September and 7.0 percent a year ago. The latest unemployment data available by state (September 1985) indicates New Hampshire had, for the second consecutive month, the lowest rate of any state with 2.8 percent. It is expected that the October rate of 2.6 percent will also be the lowest state rate. The number of unemployed decreased in ten areas with the largest decrease occurring in the Portsmouth-Dover-Rochester N.H. Maine metropolitan statistical area which recorded an unemployment drop of 340. The Nashua area was next with a drop of 290. Two areas, Concord and Salem (New Hampshire Portion of the Lawrence-Haverhill Massachusetts MSA) had very minor unemployment increases of 30 and 20 respectively. Unemployment rates ranged from a high of 4.4 percent in the Salem area to a low of 1.8 percent in both the Claremont and Concord areas. Overall, government jobs increased significantly in relation to education activities as school districts, colleges and technical schools added on workers as the school year got into full swing.

Nonagricultural wage and salary employment decreased by 1,200 workers as manufacturing was down 550 and nonmanufacturing 650. In manufacturing, lumber and wood products was the biggest looser with a drop of 200. In nonmanufacturing, services experienced the greatest loss with a decrease of 1,850 workers form September. Construction continued its brisk pace and added on 300 new workers. Compared to a year ago, nonagricultural wage and salary employment is up 29,200 workers as manufacturing is down 6,400, but nonmanufacturing is up 35,600.

Manchester Economic Conditions: Total unemployment decreased by 130 from September and the jobless count of 1,780 represents only 2.0 percent of the total civilian labor force of 87,810. Last month the rate was 2.2 percent and a year ago it was 2.3 percent. It should be noted that September's 2.2 rate was the lowest of the 253 metropolitan statistical areas in the country that report. It is expected that this month's 2.0 rate will follow suit. Nonagricultural wage and salary employment is up 550 from September and 2,000 from a year ago. Services recorded the largest yearly gain with an increase of 1,000 workers.

Nashua Economic Conditions: Total unemployment decreased by 290 from September as the unemployment rate dropped from 3.0 to 2.7 percent. A year ago the rate was 2.4 percent. Nonagricultural wage and salary employment increased by 450 from September and is up 2,100 form a year ago. Manufacturing is down 1,800 from last year's level, however, nonmanufacturing is up by 3,900 workers. In the manufacturing sector, durable goods is down 1,000 while nondurables is down 800. In the nonmanufacturing sector, trade is up 1,300 and services 1,150.

New Hampshire Labor Force, Total Employment and Unemployment and Nonagricultural Wage and Salary Employment as of the Middle of the Month

ECONOMIC CONDITIONS IN NEW HAMPSHIRE

A REPORT BY THE NEW HAMPSHIRE DEPARTMENT OF EMPLOYMENT SECURITY PREPARED IN COORDINATION WITH THE UNITED STATES BUREAU OF LABOR STATISTICS

November
Wesley S. Noyes, Jr., Editor
Supervisor, Economic Analysis and Reports
85-11

SUMMARY: Total unemployment in New Hampshire increased by 460 from mid-October to mid-November. The latest total of 14,360 unemployed represents 2.7 percent of the civilian labor force of 540,040. The October rate was 2.6 percent and a year ago it was 3.2 percent. Based on the latest state and area data available (October 1985), New Hampshire has had the lowest rate of any state in the country for the past three months and the Manchester Metropolitan Area has had the lowest rate of the 253 metropolitan statistical areas in the county for the past two months. Four areas recorded increased unemployment from October, while three areas remained unchanged and five areas recorded minor unemployment decreases of 70 or less. Seasonal unemployment, as well as some layoffs in manufacturing, accounted for the slightly increased unemployment rate. While some trade establishments added on additional workers in preparation for Christmas business, others curtailed operations as tourism decreased significantly after the Columbus Day holiday. Unemployment rates ranged from a high of 4.8 percent in the Littleton area to a low of 1.8 percent in the Claremont and Concord area. Year ago comparisons point out that ten of the areas recorded lower unemployment in November 1985 then in November 1984.

Nonagricultural wage and salary employment decreased by 450 workers from October as manufacturing was up 800 while nonmanufacturing dropped 1,250. Compared to the same period a year ago, nonagricultural wage and salary employment is up 30,600 workers as manufacturing is down 5,350 and nonmanufacturing is up 35,950. The largest gain occurred in trade which is up 16,900. Construction continued to experience a very good year as employment is up 7,950 from a year ago. The most significant drop in jobs occurred in electrical products which is down 2,750 from last year.

Manchester Economic Conditions: Total unemployment remained unchanged from October. The 2.0 percent unemployment rate is expected to, once again, be the lowest of any metropolitan statistical area reporting. A year ago the rate was 2.1 percent. Nonagricultural wage and salary employment increased 500 workers from October and is up 2,100 from the year ago level. Over the year manufacturing has decreased by 600 workers while nonmanufacturing has increased by 2,700. Services is up 1,100 and construction is 800 over last year's level.

Nashua Economic Conditions: Total unemployment increased only slightly as the unemployment rate remained unchanged at 2.7 percent. A year ago the rate was 2.2 percent. Nonagricultural wage and salary employment increased by 750 from October and is up 2,450 from a year ago. While manufacturing is down 1,250 from last year, nonmanufacturing is up 3,700 workers. In the manufacturing sector, durable goods is down 600 and nondurables 650. However, in the nonmanufacturing sector, trade is up 1,450, services 1,000, and construction 750.

New Hampshire Labor Force, Total Employment and Unemployment and Nonagricultural Wage and Salary Employment as of the Middle of the Month

ECONOMIC CONDITIONS IN NEW HAMPSHIRE

A REPORT BY THE NEW HAMPSHIRE DEPARTMENT OF EMPLOYMENT SECURITY PREPARED IN COORDINATION WITH THE UNITED STATES BUREAU OF LABOR STATISTICS

December
Wesley S. Noyes, Jr., Editor
Supervisor, Economic Analysis and Reports
85-12

SUMMARY: Total Unemployment in New Hampshire decreased by 470 from mid-November to mid-December. The latest total of 13,890 unemployed represents only 2.6 percent of the civilian labor force of 544,400. The unemployment rates were 2.7 percent in November and 3.5 percent a year ago. It should be noted that New Hampshire has recorded the lowest unemployment rate of any state in the country for the last four months, and it is likely that December's 2.6 rate will follow suit. Nationally, the unemployment rates were 6.7 percent in December, 6.7 percent in November, and 7.0 percent a year ago.

Six labor market areas experienced decreased unemployment from the previous month. Nashua recorded the largest unemployment decrease with 230 fewer jobless. Two areas, Berlin and Keene, had no change in unemployment. Four areas recorded unemployment increases led by the Laconia area with 150 more unemployed. The rates of unemployment ranged from a low of 1.7 percent in the Claremont and Concord areas to a high of 5.6 percent in the Littleton area. Compared with a year ago, nine areas recorded decreased unemployment levels while three areas, Nashua, Littleton, and Pelham recorded increased unemployment levels.

There was a significant increase of employment in trade from November as firms hired additional workers for the Christmas business. Also, services employment increased due in part to the beginning of the skiing season in New Hampshire. Construction employment dropped as a result of layoffs due to winter weather conditions.

Nonagricultural wage and salary employment increased by 2,600 from November as manufacturing is up 550 workers and nonmanufacturing 2,050. Although construction lost 1,050 workers from November, trade gained 1,700 and services 850. Compared to a year ago, nonagricultural wage and salary employment is up 30,550 workers as manufacturing lost 5,150 workers during the year while nonmanufacturing gained 35,700. Trade recorded an increase of 15,950 workers from a year ago. Services is up 7,800 and construction 8,100.

Manchester Economic Conditions: Total unemployment decreased by 200 from November as the unemployment rate dropped from 2.0 to 1.8 percent. A year ago the rate was 2.4 percent. The Manchester area has had the lowest unemployment rate of the 253 metropolitan reporting areas in the country for the past three months. With December's rate of 1.8 percent, it is safe to assume that this will be the case once again. Nonagricultural wage and salary employment increased by 250 workers from November and is up by 2,500 workers from the year ago level. While manufacturing is down 650 from a year ago, nonmanufacturing is up 3,150. The largest yearly industrial gain occurred in services which is up 1,000 workers.

Nashua Economic Conditions: Total unemployment decreased by 230 from November as the unemployment rate dropped from 2.7 to 2.5 percent. A year ago the rate was 2.3 percent. Nonagricultural wage and salary employment decreased by 50 from November, but has increased by 2,150 workers from a year ago. While manufacturing is down 1,550 from a year ago, nonmanufacturing is up 3,700. In the nonmanufacturing sector, trade is up 1,500, services 1,050, and construction 750.

ECONOMIC CONDITIONS IN NEW HAMPSHIRE

A REPORT BY THE NEW HAMPSHIRE DEPARTMENT OF EMPLOYMENT SECURITY PREPARED IN COORDINATION WITH THE UNITED STATES BUREAU OF LABOR STATISTICS

January

Wesley S. Noyes, Jr., Editor
Supervisor, Economic Analysis and Reports

86-1

SUMMARY: Total unemployment in New Hampshire increased by 3,890 from mid-December to mid-January. The latest total of 20,720 unemployed represents 3.8 percent of the civilian labor force of 545,440. The revised December rate of 3.0 percent is based on an annual adjustment by the Bureau of Labor Statistics which reflects changes in population controls, residency factors using 1980 Census data in place of 1970 Census data, and new benchmark employment estimates. Due to the benchmark revisions and new factors, the unemployment methodology used by all states usually results in significant changes between December of one year and January of the next. A year ago the unemployment rate was 4.7 percent. Nationally the rates were 7.3 percent in January, 6.7 percent in December and 8.0 percent a year ago. It should be noted that New Hampshire has tied with Massachusetts for the lowest annual 1985 unemployment rate in the country with 3.9 percent unemployed. This marks the third consecutive year that N.H. has tied for the lowest rate having tied with South Dakota in 1984 with 4.3 percent and in 1983 with 5.4 percent.

In January, all areas except Littleton and Salem experienced increased unemployment. The largest unemployment increase occurred in the Manchester MSA with 1,160 more unemployed. The Littleton LMA had 230 fewer unemployed as skiing and tourism activities began picking up. The Salem area had 160 fewer unemployed as some recalls were made in manufacturing. Unemployment rates ranged from a low of 2.4 percent in the Claremont area to a high of 5.6 percent in the town of Pelham. Five areas had rates above the State average, six areas had rates below, and the Nashua area recorded the same rate as the State 3.8 percent. Overall, layoffs occurred in trade establishments after the Christmas business, in construction as colder weather prevailed, and in manufacturing as some firms experienced a lack of orders. Some pickup in employment occurred as ski operations required additional seasonal workers.

Nonagricultural wage and salary employment decreased by 10,400 from December as manufacturing was down 550 and nonmanufacturing 9,850. Compared to a year ago, nonagricultural wage and salary employment increased by 26,900 as manufacturing is down 2,550 while nonmanufacturing is up 29,600. The largest manufacturing loss occurred in electrical products which dropped 2,750 over the year. However, in nonmanufacturing, construction increased 9,000, services 8,000, and trade by 7,800.

ANNOUNCEMENT: The U.S. Bureau of Labor Statistics, due to federal budget cuts, plans to eliminate seventy five metropolitan areas in the country from the Current Employment Statistics Program effective March 1, 1986. The Manchester MSA will no longer be included in the Bureau's validation series on monthly employment and hours and earnings of production workers. We plan to continue both series using State funds in 1986 to meet the demand for current labor market information at the local level.

ANNUAL BENCHMARK: The revised employment series for Statewide, Manchester, and Nashua for 1984 and 1985 are included in this issue. The latest employment benchmark is March 1985, and the employment for all twelve months of 1984 and three months of 1985 are based on quarterly reports of all employers covered by the Unemployment Compensation Law in New Hampshire and final estimates of noncovered employment. The employment for the period from April 1985 to date is estimated using monthly sample data projected from the March 1985 employment level.

Our nonagricultural employment series in the past has included one half of the employment at the Portsmouth Naval Shipyard since half of the workers reside in New Hampshire. The shipyard is actually located in Kittery, Maine. The nonagricultural employment reported to the Bureau of Labor Statistics and published in their monthly publication "Employment and Earnings" did not include the additional employment at the Portsmouth Naval Shipyard. Now the labor market users will have the same employment data as our series will exclude one half of the naval yard employment to make the data comparable and cause less confusion among users. Data beginning with January 1984 shows reduced employment of around 4,200 in federal government, total government, total nonmanufacturing, and total nonagricultural due to this reporting change.

NASHUA ECONOMIC CONDITIONS: Total unemployment increased by 610 from December and the unemployment rate increased from December's revised rate of 3.1 percent to 3.8 percent in January. A year ago the rate was 3.5 percent. Nonagricultural wage and salary employment decreased by 1,200 from December, but is up 1,750 from a year ago. Manufacturing decreased by 1,500 while nonmanufacturing increased 3,250. The largest over the year industrial gain occurred in services with an increase of 1,100 workers. However, on the negative side, machinery and electrical products is down 1,350 from last year.

MANCHESTER ECONOMIC CONDITIONS: Total unemployment increased by 1,160 and the jobless total of 3,000 represented 3.6 percent of the civilian labor force. The rate in December was 2.2 percent. A year ago the rate was 4.2 percent. Nonagricultural employment numbered 80,650 which was 1,250 less than the December total. The largest employment decreases were in trade and construction with decreases of 550 and 250 respectively.

New Hampshire Labor Force, Total Employment and Unemployment and Nonagricultural Wage and Salary Employment as of the Middle of the Month
